WHAT IS PASSIVE SMOKING (SECOND-HAND SMOKING)

Passive smoking is when someone breathes in the combination of:

- smoke exhaled by a smoker and
- smoke from the end of a burning cigarette

Some facts about Second-Hand Smoke:

- Second-hand smoke exposure can be just as harmful to the unborn baby as the mother herself smoking during pregnancy
- In one hour, a person in an extremely smokey room, inhales enough toxic chemicals to equal 10 cigarettes
- There is no safe level of second-hand smoking - Second-hand smoke poses a risk to all those around you, even to your pets too!
- There are over 7000 chemicals found in second-hand smoke, hundreds are toxic and about 70 can cause cancer
- Second-hand smoke can be more toxic than the smoke inhaled by a smoker

TOP TIPS TO MAKE YOUR HOME AND CAR SMOKE-FREE:

- Encourage your family to agree on a date to make the home Smoke-Free
- Remove all ashtrays and lighters from indoor areas
- Display a NCACCH "Let's Clear the Air" magnet on the fridge and a sticker at the front door
- Ask family and friends to smoke outside when they visit
- Hang a NCACCH "Let's Clear the Air" air freshener in your car
- Don't take your cigarettes with you in the car
- Clean out the ashtray and remove the cigarette lighter from the car
- Encourage everyone to smoke outside of the car

REMEMBER!!

It is illegal to smoke in the car with a child under 16
